Prevention of Substance Use In Youth

Student Assistance Counselors deliver evidence-based programs to prevent loss of life among youth, delay age of onset or first use, break the cycle of addiction in families, and improve access to services (prevention, treatment and recovery) through school and community partnerships.

Although 80 percent of American youth reported participation in school-based prevention in 2005, only 20 percent were exposed to effective prevention programs. We hope to change this statistic with increased workforce funding.

Evidence-based programs, statistically, have significant effects on mental health outcomes and substance use prevention outcomes. Research shows that for each dollar invested in prevention, a savings of up to $10 in treatment for alcohol or other substance abuse can be seen.
